

Intratec Primary Commodity Prices Methodologies

Intratec obtains price values through structured data processing pipelines developed by a team of market experts, computer scientists, and data scientists. Such strategy relies on advanced technologies to extract, store, process, and analyze various publicly available data from a wide range of open sources as soon as they are released. This data is then processed through mathematical models to generate reliable assessments, published at the very beginning of each month.

To better understand data provided by Intratec Primary Commodity Prices, check the following documents:
